

Companio — Full Architecture (1/2)

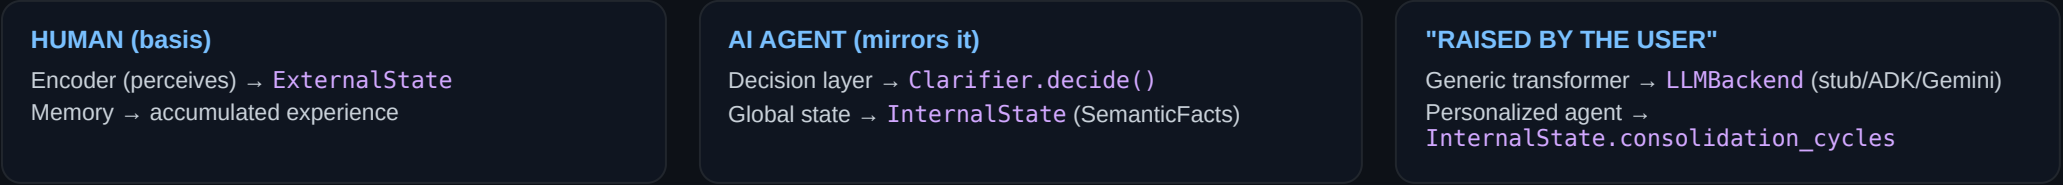

Every box below is real, running code — not a diagram drawn after the fact.

The full agent loop

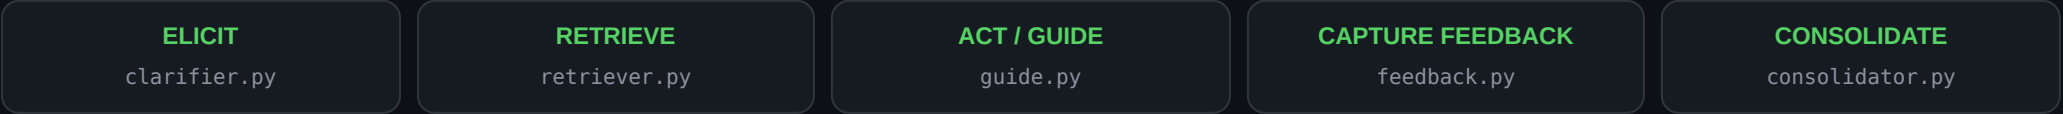

↑ feeds back in — next turn's `_load_internal_state()` reflects everything consolidated since ↑

Structural parallel: human vs. agent

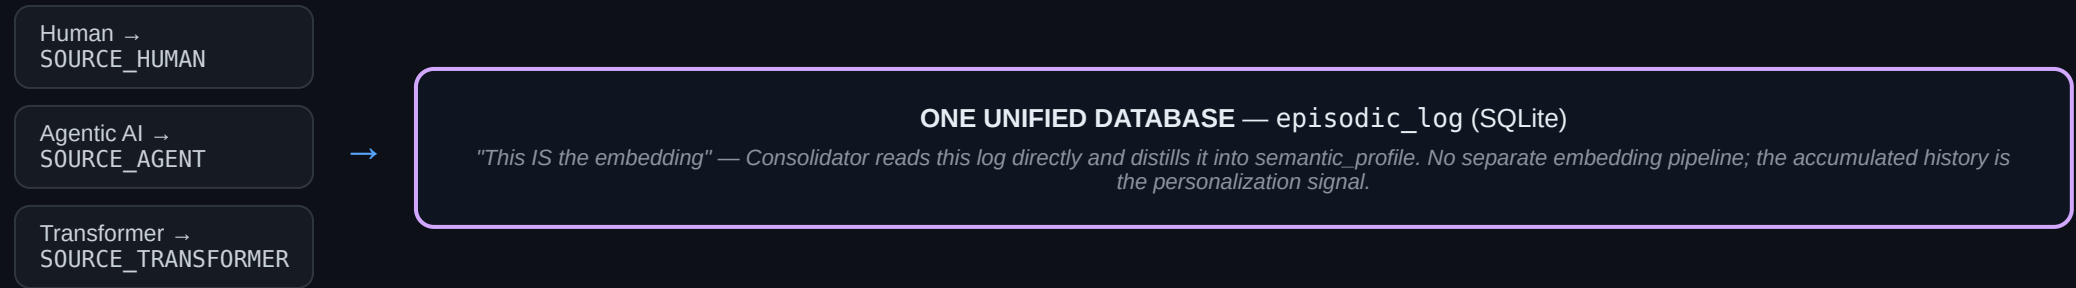

Five-stage engineering loop

Companio — Full Architecture (2/2)

The unified memory, the confidence math, and how contradictions are handled.

The unified embedding database

Confidence scoring (inside ELICIT)

```
confidence = w1·slot_fill_rate + w2·retrieval_score + w3·profile_match
```

< 0.4 → ASK

$0.4 - 0.75$ or weak profile → PROCEED_WITH_FLAG

≥ 0.75 and strong profile → PROCEED_SILENT

Contradiction handling (inside CONSOLIDATE)
